

# Four Steps to a Beautiful Lawn

Our 4 step Lawn Fertilizer Program

Fertilizing your lawn is an important step in lawn care. *Fertilome* lawn fertilizer has been our favorite tried-and-true brand that provides the results you want with high-quality fertilizer. Four applications are suggested for optimum weed prevention and timely nutrients.

## April 15-May 15

***For All Seasons II* 16-0-8.**

Providing a long-lasting preemergent crabgrass herbicide is important to give season-long control. Avoid applying until after raking and aerating are finished for the season. If you're planning on seeding grass or have seeded in late fall, do not apply this product until the grass has been mowed three times.

## Apply May 20-June 20

***Weed Free Zone Plus Fertilizer* 18-0-6**

Great for an effective combination of selective herbicides that will take care of over 200 varieties of broadleaf weeds. Do not apply if temperatures exceed 80 degrees (apply in the evening). Apply to damp grass and allow to sit for up to 48 hours before watering in. You can use this as the fall application instead if weeds are not an issue in the spring.

## August 15- September 15

***Classic Lawn Food* 16-0-8**

This formulation of general fertilizer is used to strengthen your lawn and promote thickening and greening. You can use this formulation as step 2 if weeds were not an issue in the spring. Water this product in with  $\frac{1}{2}$ " of water within 24 hours of application.

## October 1-November 1

***Winterizer* 25-0-6**

Featuring a slow-release fertilizer that strengthens the root system for increased winter hardiness. Winterizer will increase grass tillering in the spring, as well as the lawn being quick to green up in the spring. Water in with  $\frac{1}{2}$ " of water within 24 hours of application.
