

Dry Soil Tolerant Plants

Plants that can withstand dry conditions are important in the landscape. Even in the Midwest, there are soil profiles that do not hold moisture. We often will plant these plants in areas that have full direct sun as those areas also tend to dry out faster. If you are a gardener who also has areas that are harder to water, these plants are for you!

Perennials, Shrubs and Trees

- Coral Bells
- Hosta
- Bleeding Heart
